

Meeting 2: Oct. 9

Questions to Ask

- Do we plan on scaling this to multiple courses?
 - We should be able to scale this to multiple courses: i.e ENGR102, ENGR206, etc, but it happens once per semester (ENGR 102 in Fall, ENGR206 in Spring)
 - The courses could be hard coded, but the admin should be able to upload this info via CSV.

Notes

- We should associate a course a student is present for, i.e when a student signs in for office hours, have them choose what course they are there for.
 - This is simple enough, we can have a course field associated in our database.
 - We can create a dropdown menu for this before the mark themselves for attendance.
- The admin and TA's should be predetermined, we need that info, they should be able to upload this info, there aren't many of them.
- In the future, have a functionality to upload TA schedules to track proper attendance, i.e are the TA's working the correct hours?
- We should have a working product for use by the end of this sprint.
- We will have testing data to work with, provided by our client.
- We should re-adjust the views, have download button for admin only.

Sprint 2

- TA/Admin page by email ✓
- TA "I am here" - Student/TA data
- Admin download Student/TA data
- Student course dropdown for attendance

Sprint 3

- admin
- TA
- Student
- login
- Admin changes dropdown
 - Admin upload TA email / Admin email
 - Select by date for admin
 - email admin list*
